7.5.4 Regulation of pelvic patch water flow in *Bufo marinus*: role of bladder volume and ANG II

R. H. Parsons, V. McDevitt, V. Aggerwal, T. LeBlang, K. Manley, N. Kim, J. Lopez, and A. A. Kenedy

### CORRIGENDA

*Volume 264, March 1993*  
*Volume 33, March 1993*

Pages R630–R637: G. J. Schwartz, G. Berkow, P. R. McHugh, and T. H. Moran. “Gastric branch vagotomy blocks nutrient and cholecystokinin-induced suppression of gastric emptying.” Page R361: An incorrect formula was used to calculate the volume remaining. The correct formula appears below.

\[ V = \left( \frac{C_a}{C_b} \right) \left\{ \frac{5}{(1 - \frac{C_o}{C_b})} - 5 \right\} \]

where \( C_a \) is the concentration of dye in the stomach before saline rinse. The other factors remain as described in the article. This error resulted in a small underestimation of the magnitude of the reported phenomena in a few cases and does not alter the main findings, conclusions, or interpretations of this study.
