Brain lactate and pH dissociation in edema: $^1$H- and $^{31}$P-NMR in collagenase-induced hemorrhage in rats
S. Mun-Bryce, F. O. Kroh, J. White, and G. A. Rosenberg

Intestinal lymphatic pressure increases during intravenous infusions in awake sheep
R. E. Drake, Z. Anwar, S. Kee, and J. C. Gabel

SPECIAL COMMUNICATION

A quantitative method for classification of EEG in the fetal baboon
M. M. Myers, R. I. Stark, W. P. Fifer, P. G. Grieve, J. Haiken, K. Leung, and K. F. Schulze

Information for Authors appears in the June and December issues

CORRIGENDA

Volume 264, June 1993
Volume 33, June 1993

Pages R1065–R1070: D. M. Surina, W. Langhans, R. Pauli, and C. Wenk. “Meal composition affects postprandial fatty acid oxidation.” Results from a similar experiment performed after this article went to press have led the authors to conclude that the $\beta$-hydroxybutyrate values reported in this article are unreliable. They are probably skewed by high plasma triglyceride levels. The authors deeply regret this error and request that the readers disregard the related interpretations.
