Attention Authors:

Important Information about the NIH Public Access Policy & Your Manuscript

Under the NIH Public Access Policy, NIH is asking its funded investigators to voluntarily submit to PubMed Central (PMC) the author’s final manuscript of articles resulting from research supported in whole or in part with direct costs from NIH. According to the NIH, this policy applies only to manuscripts accepted for publication on or after May 2, 2005.

If you choose to submit your accepted manuscript to PMC, you will be asked to indicate when that manuscript should be made available to the public. As copyright holder of your article, the APS has the sole right to publish or disseminate it. However, the APS grants you permission to allow public release of your manuscript through PMC 12 months after publication in the print version of an APS journal.

This period of time is consistent with our existing policy to make all content publicly available through HighWire Press 12 months after print publication. NIH will be able to determine when 12 months have elapsed because APS sends NIH electronic feeds of the article metadata upon publication in a journal issue. Therefore, you can submit your accepted manuscript to PMC at the time of acceptance to an APS journal, and will not have to calculate or track time elapsed from publication.

NIH intends to use the PMC database of manuscripts for portfolio management; to create a permanent archive of articles based upon NIH-funded research; and to give the public access to research publications. In announcing this policy, NIH officials underscored that it is voluntary and there will be no sanctions of any kind against authors who do not submit their manuscripts. If you have any questions with respect to the NIH Public Access Policy and the publication of your article in an APS journal, please contact Margaret Reich at mreich@the-aps.org.
Call for Papers
American Journal of Physiology-Regulatory, Integrative and Comparative Physiology

Regulation of Glomerular Function by Podocytes

The American Journal of Physiology-Regulatory, Integrative and Comparative Physiology is soliciting the submission of original manuscripts in the field of physiological and molecular mechanisms regulating glomerular function, with particular emphasis on how glomerular cells, such as podocytes, regulate glomerular function. This call for papers reflects several recent discoveries in the areas of slit diaphragm protein function, glomerular architecture, glomerular basement membrane function, and the role of autocrine and paracrine mediators of glomerular endothelial and epithelial function, including those in the macula densa. Manuscripts in the areas named above are specifically sought. This call for papers is understood to include both basic and translational studies.

The responding authors should indicate in their cover letter that the submitted manuscript is in response to this call for papers. The manuscript will undergo normal peer review. If published, the article will be highlighted together with other studies appearing in response to this call.

The submission deadline for this topic is June 30, 2006. If you have any questions or already have a manuscript in this area submitted to the American Journal of Physiology-Regulatory, Integrative and Comparative Physiology and would like to have it included for this series, please contact Guest Editor, David Bates (Dave.Bates@bris.ac.uk).

Call for Papers
American Journal of Physiology-Regulatory, Integrative and Comparative Physiology

Sex Differences in Renal and Cardiovascular Function; Physiology and Pathophysiology

The American Journal of Physiology-Regulatory, Integrative and Comparative Physiology is soliciting the submission of original manuscripts in the field of physiological and molecular mechanisms governing sexual dimorphism of kidney and cardiovascular function. This call for papers is associated with the 2005 and 2006 EB featured topics on this subject. This call for papers includes basic and translational studies.

The responding authors should indicate in their cover letter that the submitted manuscript is in response to this call for papers. The manuscript will undergo normal peer review. If published, the article will be highlighted together with other studies appearing in response to this call.

The submission deadline for this topic is May 31, 2006. If you have any questions or already have a manuscript in this area submitted to the American Journal of Physiology-Regulatory, Integrative and Comparative Physiology and would like to have it included for this series, please contact Guest Editors, Chris Baylis and Kate Denton (baylisc@ufl.edu and kate.denton@med.monash.edu.au).
The American Physiological Society

CLASSIC ARTICLES

Commemorating the APS Legacy Project—more than 100 years of the APS Journals content

The American Physiological Society is proud to announce that the full historical content of its 14 journals, going back to the very first issues of the American Journal of Physiology in 1898, is now available online—as the APS Legacy Project.

To commemorate this event, we have asked a group of expert authors to write essays on some of the most significant articles from the body of APS literature.

A Few Samples of the Classic Articles

Listed below are a few of the Classic Articles which have been singled out for essays written by eminent scientists with first-hand or personal experience in the field. All the essays and Classic Articles are free for viewing by all users at this web site: www.the-aps.org/publications/classics

➤ You can order the full set of Legacy Content for a one-time low price of $2,000. For more information, go online at: www.the-aps.org/publications/legacy

Dear Librarian,

I would like to recommend that our library subscribe to the American Journal of Physiology–Regulatory, Integrative and Comparative Physiology. This is a journal published online and in print monthly by The American Physiological Society (APS).

The American Journal of Physiology-Regulatory, Integrative and Comparative Physiology specializes in research articles in regulation, integration, and homeostasis. Significant topics addressed include comparative physiology, regulation and integration in autonomic physiology, behavior, cardiovascular physiology, endocrinology, energetics, fluids and electrolytes, functional morphology, ingestion, periodicity, respiration, and temperature.

How to subscribe: You can subscribe in one of three ways: 1) Online Only, 2) Print & Online, or 3) Print Only. The different subscription rates can be found below. You can also choose to receive free e-mail table of contents notification when new content is released on the web.

SPECIAL FEATURE

Legacy Content Package Offer: Pay only one fee today and access forever: Librarians can purchase online access to the legacy content of all 15 APS research journals (including AJP-Regulatory, Integrative and Comparative Physiology)—at a one-time fee of $2,000 for perpetual use. This legacy content contains over 100 years of historical scientific research.

CESS FEATUER

NEED ACCESS TO THIS JOURNAL IN YOUR LIBRARY?

DEAR READER, please present this recommendation to your librarian, completing the information below, or e-mail them the following web site for their review: ajpregu.org
Instant Access to Accepted Papers Online

The American Physiological Society (APS) brings to its readership another exciting innovation in scientific publishing with Articles in PressS. In partnership with HighWire Press, we publish online—within only days after their acceptance—peer-reviewed papers submitted to our prestigious research journals.

This novel concept dramatically reduces time to publication, accomplishing an important goal of The American Physiological Society of providing researchers all over the world with instant, subscription-based access to the newest literature.

**APS Articles in PressS are citable, searchable in PubMed, and will establish publication priority.** Only original research papers are published in APS Articles in PressS. Reviews, Editorials, Letters to Editors, Lectures, Commentaries, and other invited materials will be published in the copyedited print and online editions of the appropriate APS Journal.

Once a paper is published online as Article in PressS, it proceeds through the established course of thorough copyediting and production, leading to its publication (about 12 weeks later) in the final print and online editions of the appropriate APS Journal. This final version will bear the date, volume, and page numbers as well as the Articles in PressS publication date and identifier, called the DOI.

After the Journal issue is published in print and online, the final version of the paper will come up on search while the Articles in PressS version will be stored in an accessible, permanent archive.

We hope that this important service to our authors and readers will meet their expectations. View the APS Articles in PressS pages at the journal home pages: ajpcon.org, ajpcell.org, ajpendo.org, ajpgi.org, ajpheart.org, ajplung.org, ajpregu.org, ajprenal.org, jap.org, jn.org, and physiolgenomics.org.

Sample Citation for an Article in PressS:

Citation of a paper that was first published in Articles in PressS will appear in print as follows: Scarafia LE, Winter A, and Swinney DC. Quantitative expression analysis of the cellular specificity of HECT-domain ubiquitin E3 ligases. *Physiol Genomics* 4: 147-153, 2001. First published April 26, 2001; 10.1152/physiolgenomics.00075.2001.
The American Journal of Physiology-Regulatory, Integrative and Comparative Physiology has an impact factor of 3.627 and publishes original investigations that illuminate normal or abnormal regulation and integration of physiological mechanisms at all levels of biological organization, ranging from molecules to humans, including clinical investigations. Major areas of emphasis include:

- regulation in genetically modified animals
- model organisms and comparative functional genomics
- development and tissue plasticity
- neurohormonal control of circulation and hypertension
- local control of circulation
- cardiac and renal integration
- thirst and volume, electrolyte homeostasis
- appetite and obesity
- inflammation and cytokines

Authors are required to submit papers online at www.apscentral.org.

Special Features Include:

- Sign-up for e-mail notification of advance tables of contents
- Fully searchable text, including PubMed
- Rich color and sharp resolution of figures
- Editor’s Home Page: www.the-aps.org/publications/ajpregu
- Articles in Press: Accepted research papers are now published online within a few days after their acceptance.
- Perpetual/Electronic Archiving: The LOCKSS system preserves the electronic content of all APS journals.

Special APS Member Benefits:

- FREE Online Access to 15 APS Journals and APS Journal Legacy Content: Members of the American Physiological Society (APS) receive FREE online access to both the current content and legacy content (going back as far as 100 years for some journals) of these APS research journals (this free online access includes AJR-Regulatory, Integrative and Comparative Physiology).
- FREE Color Figures: Regular and Emeritus Members of APS who are first or last authors receive FREE color figures in all APS journals.

The American Physiological Society (APS) offers free-of-charge access to the full text of articles (approximately 20,000 articles) published in our online journals after only 12 months from the publication date (going back to 1997).

Our large and growing library of physiology research is available to anyone with internet access. The journal publishing program of The American Physiological Society covers the entire spectrum of physiology—examining major physiological systems from the cellular and molecular to the organ and system level. All APS journals are available in print and online. Online subscriptions include free-of-charge online search capabilities extending to over 350 outstanding biomedical journals published online by HighWire Press.
