
In RESULTS, the third sentence in the fourth paragraph should have stated: “In the P1 offspring, miRNAs 29c and 183 were downregulated in expression in MUN, and therefore their predicted target genes would be expected to be upregulated. The integrin-β1 gene met this criterion showing greater expression by the DNA array. In the 12-mo group SCD1 mRNA, a target of miRNA 200b downregulated in the MUN group, showed a 3.3-fold increase in expression by the DNA array.” The words in bold are corrections.
